### **Executive Summary**

GEI Consultants, Inc. (GEI) has conducted a Phase I Environmental Site Assessment (ESA) on behalf of the Trust for Public Land and Frederick Baumgarten (collectively referred to as the "Client".) The Site is approximately 1.5 acres of land located in Mystic, Town of Stonington, Connecticut (Site).

The Site has a long history of residential and industrial activities dating back to the turn of the century. The Site was originally much smaller in size but was built up to extend into the Mystic River. The fill material used to enhance the property boundary was likely coal and slag from the adjacent Velvet Mill. Shortly after the change in boundary, a residential structure was built which has remained and been used for residential housing. A detached garage exists to the north of the residential building and the surrounding area has had various uses: coal storage, automobile storage, blacksmith shop, stonecutting, auto painting, and warehouse storage. The garage is currently used as a training facility for local crew and rowing teams. In addition, previous investigations have noted a tunnel traversing the Site from the Mill to the east and discharging to the Mystic River. This tunnel was not observed during the GEI reconnaissance.

The Phase I ESA identified two Areas of Concern (AOCs): 1) Site-wide fill and 2) Former Tunnel. These AOCs have been identified by previous investigations with testing of the soil and groundwater. The results of these investigations have indicated that releases have occurred from both AOCs with constituents of concern including petroleum, heavy metals, and polycyclic aromatic hydrocarbons (PAHs).

We do not recommend additional investigation for either of these identified AOCs. For AOC-1, additional investigation will likely not result in further delineation of impacts given the suspected widespread distribution of the fill materials. However, future Site redevelopment involving soil disturbance activities and change of use should employ institutional controls to recognize the presence of the fill materials and associated constituents. These institutional controls could include soil management plans, land use restrictions, or a combination of both. Once again, current regulations do not require that this Site perform any additional activities at this time.

For the second AOC, the extent of the former tunnel should be further defined. If the tunnel is still present, we recommend the contents of the tunnel are flushed and properly characterized and disposed. Once the contents of the tunnel is removed, we recommend capping both ends of the tunnel to prevent any additional discharges from occurring.

No additional AOCs, including historic AOCs or controlled AOCs, as defined by aboveground storage tank (AST) 1527-13, were evident of past, current or future potential releases of oil or hazardous materials at the Site.

A Site reconnaissance was performed by Brian Conte of GEI on June 2, 2016. One AST was identified during the Site review. The tank was located in the basement of the residential structure and appeared to be in good condition with no releases noted. With the exception of slag and brick solid waste observed off Site along the Mystic River bank, no indications of staining or releases were observed during the Site reconnaissance.

One underground storage tank was identified for the Site but was removed in 2008. Review of the closure documentation indicated no release associated with the former tank and the removal was performed in accordance with state tank closure guidance. A former AST was reportedly located below the crawl space of the detached garage. The tank was not observed during the Site reconnaissance and no evidence of a release (i.e., staining or odors) were noted in the approximate former location.

Based on a review of town land records, no environmental records or liens were identified for the Site. There were no state or federal records for the Site. Several spills and leaking USTs were on file for the Mystic Seaport. The Seaport is downgradient of the Site and impacts to the groundwater or vapor intrusion are unlikely to impact the Site. No state or federal records were identified for the mill located to the east of the Site.

An American Society for Testing and Materials (ASTM) Tier I Vapor Encroachment Screening was conducted. A 1998 petroleum release occurred at the Mystic Seaport and was identified. The results of the screening included this off-Site release but did not qualify as an AOC.

No evidence was found indicating the Site meets the definition of an Establishment. Vehicle painting activities were documented at the Site but appear to have ceased prior to 1968, the activity date set forth in the Transfer Act regulations. The Establishment designation is a legal term and therefore should be rendered by a legal professional with specialized knowledge in Connecticut's environmental laws.

Finally, no significant data gaps were identified during this investigation. As such, this assessment was performed in conformance with the scope and limitations of ASTM Standard Practice E 1527-13.

### 1. Introduction

### 1.1 Purpose

The purpose of this report was to perform, on behalf of the Trust for Public Land and Fred Baumgarten, collectively referred to as "Client", a Phase I Environmental Site Assessment (ESA) Report for one parcel, totaling approximately 1.5-acres of land known as Map 172, Block 1, Lot 1 located at 123 Greenmanville Avenue in Mystic, Town of Stonington, Connecticut (Site; Figure 1).

This Phase I ESA was conducted by GEI Consultants, Inc. (GEI) in accordance with the requirements of the American Society for Testing and Materials (ASTM) Practice E1527-13. The Phase I ESA standard is designed to identify certain environmental conditions at the Site and adjacent properties:

- 1. Identify Areas of Concern (AOCs), defined by ASTM as a condition with the potential for a past, current, or future release of oil or hazardous material (OHM) at the Site.
- 2. Identify historic AOCs; defined by ASTM as a past release of OHM that has achieved regulatory closure without required controls or conditions.
- 3. Identify controlled AOCs; defined by ASTM as a past release of OHM that has achieved regulatory closure with required controls or conditions.
- 4. Evaluate the potential for a release of OHM at the Site.

An evaluation of business environmental risk associated with the parcel of land may necessitate investigation beyond that identified in this practice. Additional site investigations that may be required based on the findings and conclusions of the Phase I ESA have not been included with this report and require a separate scope of services.

The scope of services for the Phase I ESA included multiple tasks:

- Conduct a municipal, State of Connecticut Department of Energy and Environmental Protection (CT DEEP), and Environmental Protection Agency (EPA) database and regulatory file review of the property and relevant nearby properties.
- Review available previous environmental reports.
- Assess potential environmental receptors (i.e., groundwater, surface water, and water supplies).
- Describe the Site geology.
- Perform a Site reconnaissance to assess visible signs of potential environmental impairment.

- Summarize the findings relative to the potential presence of hazardous substances or petroleum products at the Site.
- Recommend additional investigations at the Site, if appropriate.

Appendix A of this report provides a signed declaration that this Phase I ESA was conducted under the supervision of an Environmental Professional, and that the Environmental Professional meets the professional qualifications set forth in ASTM-E 1527-13.

### 1.2 Limitations and Exceptions

The scope of services did not include the assessment of considerations not within the scope of the ASTM Phase I ESA standard, i.e., non-scope considerations. These include, but are not limited to Asbestos-Containing Materials, Radon, Lead-Based Paint, Lead in Drinking Water, Wetlands, Regulatory Compliance, Cultural and Historic Risks, Industrial Hygiene, Health and Safety, Ecological Resources, Endangered Species, Indoor Air Quality, Biological Agents, Mold, and High Voltage Power Lines.

### 1.3 Data Gaps

No data gaps were identified.

### 1.4 Site Description

The Site consists of a 1.5-acre parcel of land with two structures located at 123 Greenmanville Avenue in Mystic, Town of Stonington, Connecticut. The first structure is a two-story residential building with approximately 2,692 square foot gross living space). The residential building is currently vacant but available for rent. A large wooden deck enclosing an above-ground swimming pool is located on the western portion of the house. The second structure is a single-story detached garage with approximately 1,980 square feet of area (Stonington Property Card). The structure is currently used for a training and storage area for crew and rowing racing activities. Three crew boats were observed outside the garage during the Site reconnaissance. A crawl space is located below the detached garage. Both structures are located along the eastern portion of the Site adjacent to Greenmanville Avenue. The Site is fenced along Greenmanville Avenue with an unpaved road access from Greenmanville Avenue to the west of the house. A site schematic plan is provided as Figure 2.

To the west, the Site includes a grassed open space which gently decreases in elevation to the Mystic River. According to the parcel map, the Site includes the upland portions of the property up until a beached area which transitions to the Mystic River. The map also indicated a drainage easement along the southern Site and a right-of-way to the north.

Previous environmental investigations have noted a hole (approximately 12 inches in diameter) on the east central portion of the garage which extends to a tunnel under Greenmanville Avenue.

Various piping (presumed heating) were visible in the tunnel (Paul Burgess LLC, 2008). This hole was not observed during the Site reconnaissance performed by GEI on June 2, 2016.

Site Criteria	Site Information
Tax Map Block Identification	172/1/1
City Zoning	Residential, High Density (RH-10)
Location	Latitude: 41° 21' 52" Longitude- 71° 57' 48"
Property Size	Approximately 1.5 acres
Resource Conservation and Recovery Act (RCRA) Reporting Status	Does not currently report
Transfer Act Status	The Site does not appear to be an Establishment.
Previous Site Industrial Codes	NA.
Previous Site industrial Codes	NA
CT DEEP groundwater classification	GB
Nearest Surface Water Body	Mystic River comprises the western site boundary and is a SB classified river.
Expected overburden groundwater flow direction	West and southwest
Depth to groundwater	3 to 9 feet below grade
Site Drainage Basin	Mystic River
Utilities	Public water and sewer, and electricity

### 1.5 Site Ownership

A review of available land title records was conducted to determine previous site ownership to the extent practicable within the limits of this project scope. This review should not be considered a complete title search. Assessor's and Town Clerk records indicate the following property ownership summary.

- Frederick H. and George A. Baumgarten to Frederick H. Baumgarten, October 2015
- Mystic River Realty to Frederick H. and George A. Baumgarten, November 1988
- Harry W. Baumgarten to Mystic River Realty, November 1963
- John Rossie to Harry Baumgarten January 1963
- Mystic River Industrial Corp. to J Rossie Velvet Mills, February 1939

An electronic search of land records at the Stonington Town Clerk's office did not identify any CT DEEP or EPA orders or liens recorded on the land records.

### 1.6 Surrounding Land Use

The surrounding land use is mixed commercial and residential along Greenmanville Avenue (Route 27):

- North: A small restaurant.
- Northeast: Across Greenmanville Avenue is a residential neighborhood.
- East: The former Rossie Velvet Mill (Rossie Mill), which was a textile mill. Further to the east are Mystic Little League ball fields.
- South: Seaman's Inn (Restaurant) associated with the Mystic Seaport located further to the south.
- West: The Mystic River.

### 2. Environmental Site Setting

### 2.1 Surface Soil

According to the 1992 USGS Surficial Materials Map of Connecticut, the Site surface soil is sand and gravel overlying sand. Based on soil borings conducted on-Site by others, these natural deposits are overlain by 6-8 feet of fill including coal ash, cinders, and slag (Atlantic, 1995 and TRC, 2000).

### 2.2 Bedrock Geology

According to the 1985 *USGS Bedrock Geological Map of Connecticut*, bedrock geology underlying the site is listed as Mamacoke Formation, medium-grained gneiss. Bedrock outcroppings were not observed during the Site reconnaissance.

### 2.3 Groundwater Depth and Flow Direction

The flow direction of groundwater is controlled mainly by topography. However, flow is also influenced by aquifer type, depth to bedrock, watercourses near the site, groundwater use, and subsurface structures. Generally, groundwater flows from topographic high points to low points. Based on the topography of the Site and vicinity, local groundwater flow is predicted to flow to the west/southwest toward the Mystic River. The 1995 Atlantic report indicated groundwater depth at approximately 9 feet below grade near the eastern extent of the Site and 4 feet towards the western portion of the Site and the Mystic River. It is likely that the groundwater is tidally-influenced by the proximity to the Mystic River and Long Island Sound.

### 2.4 Groundwater Classification

Groundwater below and near the Site is classified by the CT DEEP as a GB groundwater area. The GB classification indicates (1) groundwater within highly urbanized areas or areas of intense industrial activity; and (2) areas where public water supply service is available. The groundwater may not be suitable for direct human consumption because of waste discharges, spills or leaks of chemicals, or land-use effects. In addition, the groundwater below the Site and surrounding area is likely saline and therefore not suitable for consumption.

#### 2.5 Surface Water

The nearest surface water to the Site is the Mystic River which directly abuts the Site to the west. This surface water is classified by the CT DEEP as SB, designating the waters for marine fish, shellfish, and wildlife habitats, recreation, industrial supply, and other legitimate uses, including navigation.

### 2.6 Water Supply Wells

The Site vicinity is supplied potable water by the Aquarion Water Company. Again, it is unlikely the groundwater at the Site and surrounding area is suitable for consumption given likely salt water intrusion from the tidally-influenced Mystic River. According to the CT DEEP Water Quality Classifications, Stonington, Connecticut Map, the Site is not located within an Aquifer Protection Area.

#### 2.7 Flood Classification

The entire Site is located within Zone AE of the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map, Map Number 09011C0527, revised August 5, 2013. A "Zone AE" area is defined as an area inundated by 1% annual chance flooding, for which Base Flood Elevations have been determined (FEMA website, 2016). A copy of the map is provided in Appendix C.

### 2.8 Potential Sensitive Receptors

Several potential sensitive receptors were identified for the Site and surrounding area:

- The Site is currently used for training for local crew and rowing teams. As such, potential exposure exists to soils and sediments during these recreational activities. These exposures are consistent with the current residential zoning.
- The Mystic River is a potential sensitive receptor given its close proximity to the Site. Impacts from the Site to the River may also be transported to Long Island Sound located within ½ mile downstream of the River.
- No residential or public supply wells were identified within the ½ mile of the Site.
   However, a more robust full well survey would be required to definitively identify well locations.
- No schools or day cares were identified within ½ mile of the Site.

### 3. User Provided Information

### 3.1 Title Records

A title search was not performed as part of this ESA.

### 3.2 Environmental Land Use Restriction (ELUR)

No information concerning environmental liens or activity use limitations was provided by the current property owner or Client to GEI for review as of the issuance of this Phase I ESA report. GEI reviewed a CT DEEP-maintained database, updated in August 2015, listing properties with ELURs. The Site was not listed. In addition, GEI did not observe records of environmental liens or activity or use limitations during this Phase I ESA.

### 3.3 Specialized Knowledge

No specialized knowledge or experience related to the Site was provided by the user of this ESA.

### 3.4 Commonly Known or Reasonably Ascertainable Information

The user of this ESA, Client, did not provide GEI with any commonly known or reasonably ascertainable information within the local community that is relevant to identifying AOCs at the Site.

### 3.5 Valuation Reduction for Environmental Issues

No information regarding the value of the Site or how the value of the property may be impacted by environmental conditions was provided by the current Site owner or user to GEI.

### 3.6 Owner, Site Manager, and Occupant Information

The Site owner, Mr. Fred Baumgarten, was contacted during the course of the investigation. The information provided by Mr. Baumgarten is provided throughout this report and consistent with the information provided during previous investigations. In addition, Ms. Gina Anton, caretaker for the Site, was interviewed on-Site during the June 2, 2016 Site reconnaissance. Information provided by Ms. Anton is also contained within the body of this report.

### 3.7 Reason for Performing ESA

GEI has completed this ESA, on behalf of the Client, as part of the due diligence for a potential real estate transaction.

### 4. Site History

The Site history presented below was based on available reports and review of historical maps and photographs. The purpose of reviewing the history of a site is to establish a timeline of ownership and operations for the property in order to inform the client of any potential hazardous environmental conditions on or around the site.

The Site history may be compiled from available atlas maps, United States Geological Survey (USGS) topographic maps, Sanborn Fire Insurance (Sanborn) maps, aerial photographs, city directories, property tax files, recorded land title records, and building department records. All sources may not be available or may not necessarily be reviewed to meet the stated goal.

Environmental Data Resources (EDR) of Milford, Connecticut conducted a search of available historical documents including topographic maps, Sanborn maps, and city directories. A copy of these records is provided in Appendix B.

The 2008 Phase 1 ESA completed by Paul Burgess LLC included an 1879 map of Mystic which was reviewed at the Connecticut State Library. A copy of the map is included in Appendix C and provides the earliest record of Site conditions. According to the map, the Site occupied a very thin strip of land along Greenmanville Avenue suggesting much of the current Site was built up in later years. An 1898 post card confirmed the lack of building structures on the Site and a much smaller Site boundary (Appendix C).

The 1903 Sanborn map depicts the Site with a smaller land mass than what exists currently, measuring out to around 80 feet from what was Greenmanville Avenue to the Mystic River at its widest section. The Sanborn also shows a two-story dwelling with a basement in the location of the existing small house toward the southern end of the Site and a small shed to the north. The map indicates the two-story dwelling and shed were numbered 1417 and 1418 Greenmanville Avenue, respectively. It is important to note, that the Town of Stonington property card indicates the current house was built in 1945. It is likely that this date is incorrect and the house depicted in the Sanborn is the same building and was built around the turn of the century. To the east, across Greenmanville Avenue, an industrial building, labeled the Mystic Industrial Company occupied by the Rossi Velvet Company is depicted. The industrial building contains a similar footprint as present day.

The 1911 Sanborn map shows the shoreline had been extended into the Mystic River but is still reduced from the modern day configuration. An inlet, likely used for boat moorage, is shown with an associated dock and structure labels "boat box, no floor." The Sanborn also shows a coal house which had been constructed to the north along with a small automobile garage. The coal storage building appears to contain a roof but no indications as to the presence or existence

of a floor. A hose, likely used for fire suppression, is depicted to the north of the garage. The Sanborn map also indicates the dwelling address is 73 Greenmanville Avenue.

By 1924, the Sanborn map depicts the shoreline more closely to present-day configuration. Note: the 1921 topographic map shows a slight variation of the shoreline and is not consistent with the 1924 Sanborn Map. The residential structure is still present, but the coal house from 1911 has been converted to a twelve-car garage with reported steam heating and electric lighting. There is also a detached structure housing a gasoline engine. The boat house, small garage, and channel seen in 1911 are no longer present, but a second building of similar size has been constructed perpendicular to the twelve-car garage in the west. This building is one-story but the use of the building is not indicated on the map. Both buildings are labeled as belonging to the Rossie Velvet Co. A 1934 aerial photograph confirms the existence of the two structures.

The 2008 Phase 1 ESA reported dark areas on aerial photographs from the 1930s to 1970s could be the result of coal storage on and around the Site. These dark areas are visible and could not conclusively be attributed to coal storage.

The 1939 Sanborn map does not contain the second building shown in the 1911 map. The gas engine and original twelve-car garage and dwelling remain. The twelve-car garage is still labeled as belonging to the Rossie Velvet Co.

The 1963 Sanborn has the previous car garage listed as an auto painting, with the labels for the steam heating and electric light removed. The gas engine and dwelling are still depicted, however, none of the buildings shown have a designated owner or operator. The mill building to the east is labeled General Dynamics, Electric Boat Company.

The Paul Burgess Phase I ESA included City Directories from 1957, 1960, and 1961, which were not provided by EDR. According to this report, these directories listed Charles Lamphere Co. (auto painters) during this time. The Connecticut Cabinet Corp. was also listed at the Site in the 1957 directory. The 1966 City Directory, provided in the EDR report and reviewed by GEI, indicated that 73 Greenmanville Avenue, believed to be the former address of the dwelling, was occupied by Charles Corn, D.L. Puglisi, and Electric Boat div General Dynamics Warehouse. The records suggest that the dwelling remained residential and the garage was used for warehouse storage. This designation of occupancy remains in the 1971 and 1977 City Directories.

An aerial photograph from 1986 shows the southern dwelling and the garage to the north, however the gas engine does not appear on this photograph. The above-ground pool to the east of the dwelling appears in a 1990 aerial photograph. These three structures are the existing buildings that make up this site.

In the 1992 and 1995 directories the property is unlisted. The 2003 city directory cites Robert Baumgarten as the Site occupant. Other directory years reviewed (2013, 2008, and 1999), the property was listed with an "Occupant unknown".

The 2008 Phase 1 ESA completed by Paul Burgess LLC interviewed a Mr. Frederick Hermes was interviewed to provide an oral history of the site. Mr. Hermes was a long time worker at the Rossie Mill in Mystic Seaport. Mr. Hermes reported coal was brought and stored onsite from schooners and barges to supply the boiler at the Rossie Mill. The coal was transported to the boiler via an electric battery operated cart through an underground tunnel from the shore property to the mainland mill. According to Mr. Hermes, the on-site garage was used for mill vehicle storage. He also reported dye wastes were produced on site and discharged into the Mystic River, however, the discharge location was not reported.

The Site and surrounding neighborhood are included in the National Register of Historic (NRH) places. The 2007 application for the registration is provided in Appendix C. The NRH lists both the dwelling, referred to as the Lovelace home (123a), and built around 1900. The garage is listed as built in 1898 as a warehouse (123b). The description indicated it was used as a former blacksmith shop for the Rossie Mill and was transitioned into a stonecutter's workshop (occupied by Bortolo Panciera) by the 1930s.

### 5. Previous Environmental Investigations

The following three previous environmental investigations were reviewed to assess the environmental investigation performed at the Site. The review of these documents assisted in the formation of the Conceptual Site Model presented in Table 1.

# 5.1 Phase II Field Investigation, Atlantic Environmental, Inc. (November 1995)

The Phase II Field Investigation was based on conclusions and recommendations contained in a March 1995 Phase I ESA prepared by Catalyst Environmental Consulting, Inc. The Phase I ESA was not reviewed by GEI. The Atlantic investigation included the advancement of ten borings at depths ranging from 3 to 12 feet below grade. Six soil samples were collected from five borings. Two of the borings were advanced to the water table where temporary groundwater samples were collected. The sampling was performed to address several areas of concern identified in the Catalyst Phase I ESA:

- Impacts related to former above-ground storage tank (AST) located along the southwestern corner of the garage.
- Potential underground storage tank (UST) potentially located along northwestern corner of garage and west of former gas engine house.
- Fill materials throughout the Site.
- Underground tunnel.
- Upgradient potential off-site sources of contamination.

The results of the soil sampling indicated semi-volatile organics and petroleum impacts associated with the fill material. Trichlorethane, a common degreasing solvent, was detected in a shallow soil sample collected on the western edge of the Site near the Mystic River. Relatively low levels of metals were detected in most of the soil samples which included arsenic, barium, chromium, lead, and mercury.

Of note, the report recommended that an underground tunnel, travels from the former Rossi Velvet Mill, is apparently discharging an unknown petroleum product/waste through the Site. The report also recommends that the tunnel should be properly closed out (sealed with cement) to prevent future discharges to the Site.

### 5.2 Letter Report for Environmental Sampling, TRC (January, 2000)

The executive summary in the letter report is excerpted as follows:

Presented below is a summary of the findings and recommendations:

- Trace concentrations of volatile organic compounds (VOCs), those typically associated with paints and degreasers, were identified in soil and groundwater at the Site at concentrations below the reference criteria. The source of the VOCs is not known.
- A groundwater sample collected from a location presumed to downgradient of the UST indicated the presence of petroleum hydrocarbons. This finding suggests that soils in the vicinity of the tank may also be impacted with petroleum.
- Near-surface soils to the west of the garage were found to be impacted with petroleum hydrocarbons at a concentration above the reference criteria. The source, whether localized spillage or emanating from the garage or other source, is not known. The high petroleum hydrocarbon concentration was detected in only one sample, so the extent of the impacts is not known.
- Fill samples at several locations contained polycyclic aromatic hydrocarbons (PAHs), possibly as a result of cinders or coal in the fill. PAHs area also present in asphalt. Exposure to the PAHs in the fill can be prevented by covering with clean soils.
- Arsenic, previously identified in a soil sample from the river bank, was not found to be present at high concentrations in any of the tested samples.
- Other than downgradient of the UST, significant impacts to groundwater was not noted.

#### Recommendations include:

- Additional soil testing to delineate the extent and source of petroleum hydrocarbons to soils west of the garage. Testing for the possible presence of PCBs in selected samples is underway, since of the source of the petroleum is unknown.
- Removal of the UST and associated petroleum-impacted soils, if present.
- Additional groundwater testing near and downgradient of the petroleum tank.
- Consider some covering of the Site soils with clean fill as part of the development plan to assure no contact with the PAHs in existing fill once the site is developed.

## 5.3 Phase I Environmental Site Assessment, Paul Burgess LLC (July 2008)

The Phase I ESA provided a review of historical Site Use, records search, and review of previous Site investigations. Of particular significance, the report documented the removal of a 500-gallon UST on June 18, 2008. The fuel lines and tank were removed with no apparent releases to the environment. In addition, the report presents an independent evaluation of the chemical data developed during the previous site investigations.

The following conclusions were provided in the report:

- The 500-gallon gasoline UST was removed and no evidence of contamination above CT DEEP standards was detected.
- The tank in the crawl space has been removed. It appears this tank was associated with the steam heating system rather than dye waste as previously reported by others. Catalyst collected a soil sample from the areas near the tank and it contained total petroleum hydrocarbons above CTDEP standards. The soil was resampled by Paul Burgess, LLC and total petroleum hydrocarbons were not detected.
- The area near soil boring B-6 should be further investigated to determine the extent of contamination and then remediate this area.

### 6. Regulatory Review

### 6.1 Regulatory Review Sources

Records review consisted of review of the following four sources:

- EDR conducted a search of available federal and state databases for sites within approximately 1 mile of the Site. EDR provided a report which met the requirements of the ASTM Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (E 1527-13). EDR's report includes both standard and additional federal and state environmental sources for at least the minimum search distances required by E 1527-13. A copy of the EDR report, dated June 1, 2016, is provided in Appendix B.
- The United States Environmental Protection Agency Envirofacts website was also reviewed on May 31, 2016. The scope of the review was limited to federal records maintained of the Site and four adjacent properties:
  - o Mystic Seaport
  - o Seaman's Inn
  - o Rossie Velvet Mill
  - Kitchen Little
- File review at the CT DEEP on June 3, 2016. Files were requested for the following property addresses:
  - Mystic Seaport and Museum, 35 Greenmanville and 75 Greenmanville, respectively, Mystic, Connecticut
  - o Seaman's Inne, 105 Greenmanville Ave, Mystic, Connecticut
  - o Rossie Velvet Mill, 112 Greenmanville Avenue, Mystic, Connecticut
  - Kitchen Little, 36 Quarry Road, Mystic, Connecticut
- Review of previous environmental reports (See Section 5).

### 6.2 Site Findings

No spill reports or other potential recognized environmental conditions were identified within the site property boundary during the environmental data search.

### 6.3 Off-Site Findings

The environmental data search conducted by EDR identified two off-Site AOCs that may impact the environmental conditions at the site. The locations are listed below.

- Mystic Seaport and Museum, 75 Greenmanville Avenue, Mystic, Connecticut
- Mystic Seaport, 35 Greenmanville Avenue, Mystic, Connecticut

The Mystic Seaport and Museum, located at 75 Greenmanville Avenue, was reported as being a Contaminated or Potentially Contaminated Site (CPCS) due to a known UST which leaked. The incident was recorded in the Leaked Underground Storage Tank (LUST) database (case ID 31604) as occuring on November 5<sup>th</sup>, 1998. The leak resulted in the release of <2,100 gallons of commercial heating fuel. The LUST was marked as completed in the CPCS report (EDR ID S105457903). The Mystic Seaport and Museum also had three USTs that have since been permanently closed.

- Tank R1 contained 1,000 gallons of gasoline and was active from January 1st, 1950 until April 1st, 1998 when it was removed from the ground.
- Tank S1 contained 5,000 gallons of gasoline and was active from January 1st, 1950 to April 1st, 1998 when it was removed from the ground.
- Tank UL1 contained 1,000 gallons of gasoline and was active from July 1st, 1983 until December 1st, 1997 when it was removed from the ground.

The Museum also had a several reported spills. On May 19<sup>th</sup>, 2005 of 2 gallons of antifreeze (case # 200503078). They had a one gallone spill of antifreeze on August 9<sup>th</sup>, 1995 (case # 4576).

The Mystic Seaport, located at 35 Greenmanville Ave, was reported as being a CPCS due to LUST. The LUST report that coresponds to this properties CPCS status (case ID 31557) reports an unknown quantity spill of commercial heating fuel on September 16<sup>th</sup>, 1998. The LUST was marked as completed in the CPCS report (EDR ID S105457880).

Despite the current or former industrial activities at these facilities and subsequent environmental investigations, these facilities were considered downgradient of the Site and therefore do not represent a potential off-Site AOC.

No off-Site releases were identified in close proximity to the Site that would warrant identification as a potential off-Site AOC.

### 6.4 Municipal Environmental Regulatory Review

File located at the Town of Stonington Building and Assesors Department were viewed on June 2, 2016. The documents pertaining to the tank removal in June 11, 2008 represented the only

documents provided which are included in Appendix C. The Site property card and boundaries were also viewed from the Town website and provided in this appendix.

### 7. Tier I Vapor Encroachment Screening

We reviewed the EDR Report for sites at or near the Site that could potentially create a vapor encroachment condition, defined as the presence or likely presence of contaminated vapors in the subsurface caused by a release of OHM. In accordance with the requirements of the ASTM Tier I Vapor Encroachment Screening (E2600-10), we reviewed properties with suspect sources of petroleum contamination within 0.100 mile of the Site and properties with suspect sources of non-petroleum contamination within 0.333 mile of the Site. A Vapor Encroachment Screening report is provided in Appendix B.

Only one finding, the Mystic Seaport and Museum, at 75 Greenmanville Avenue, was identified. The release of petroleum compounds, as discussed in Section 6.3, were documented and reportedly closed as described in Section 6 of this report. The release would have been downgradient of the Site and therefore unlikely to present a vapor encroachment risk for the Site.

Based on the above information, and information contained in Section 6, we do not consider this event qualifying as an AOC.

### 8. Site Reconnaissance

The objective of the Site reconnaissance was to inspect the Site and accessible areas of adjacent properties to determine the presence or potential of a release of hazardous substances or petroleum products in order to identify recognized environmental conditions.

### 8.1 Inspection Personnel

The Site was inspected on June 2, 2016 by Brian Conte, LEP, CHMM, of GEI. He was accompanied by Ms. Gina Anton, Site caretaker, during the inspection. Site photographs are provided in Appendix D.

### 8.2 Building Description and Observations

### 8.2.1 Building Description

A residential home and a detached garage structure exist on the Site. A swimming pool is located to the west of the home. The residential home is two stories with a basement. The garage is one-story wood framed structure with a concrete floor. The garage is currently being used as a training facility for area rowing and crew teams. The interior of the garage included various training equipment.

### 8.2.2 Building Heating

The residential home is heated by an oil-fired furnace located in the basement. The garage is not heated. The Sanborns suggest it was once heated by steam from the Rossie Mill.

#### 8.2.3 Observed Interior Stains or Corrosion

No interior stains or corrosion was observed from either chemical, petroleum, or water were observed in either the residential home or detached garage.

### 8.2.4 Observed Interior Drains or Sumps

No interior drains or sumps were observed. The Phase I ESA conducted in 2008 indicated there was one floor drain observed in the center of the garage floor. The drain was inspected by Paul Burgess in 2008 and no oily residue was noted. The specific discharge location of the drain is unknown.

### 8.2.5 Wastewater Disposal

Town of Stonington records indicate the home was connected to sewer in 1973. A GIS map available at the Town hall confirms sewer service is available for the Site.

### 8.3 Site Description and Observation

### 8.3.1 Site Description

Assessor's records indicate that parcel is 1.5 acres. The Site is generally grassed and extends west to the Mystic River. Topography slopes gently down to the River. An unpaved driveway extends from Greenmanville Avenue behind the residential structure.

Previous investigations have noted the presence of a tunnel extending from the eastern Site (along Greenmanville Avenue) and discharging to Mystic River. This tunnel was not observed during the Site reconnaissance.

However, brick and rusted material were observed along the River bank (See Appendix D). Property maps indicate this area is not part of the Site but may provide evidence of materials used throughout the Site used to increase the upland portion of the Site.

### 8.3.2 Pits, Ponds, Lagoons, Odors, Stressed Vegetation

None observed.

#### 8.3.3 Stained Soil or Pavement

There were no exterior stained soil areas apparent.

#### 8.3.4 Solid Waste

There was no significant solid waste visible on the Site. Brick, wood, and concrete were observed along the Mystic River bank to the west of the Site. In addition, solid waste items, including plastic, wood, and concrete were observed in the crawl space below the garage (Appendix D).

### 8.4 Oil/Chemical Storage

#### 8.4.1 Current

There was no oil or chemical storage observed at the site, other than routine household chemicals and paints.

### 8.4.2 Past Chemical Storage/Waste Generation

No hazardous waste manifests were identified for the Site. It appears that the Rossie Mill used the Site for coal storage and for disposal of coal ash and slag from the boiler. The garage was original used for coal storage and then vehicle storage. Sanborns and City

Directories indicate that the garage was used for "auto painting" in the late 1950s and early 1960s.

### 8.5 On-Site Storage Tanks

### 8.5.1 Underground Storage Tanks (UST)

A map depicting an easement acquired from Mystic River Realty Corp. by State of Connecticut dated January 1980 shows a "filler pipe" south of the residential structure. This map is provided in Appendix C. It is unclear if this was an UST. Mr. Baumgarten stated he was not aware of an UST in this area.

A 500-gallon steel UST was removed from the site on June 18, 2008 by Kropp Environmental Contractors who was contracted by Mr. Baumgarten. It was located adjacent and north of the garage building below a former structure indicated on the Sanborns as "gasol eng."

The fuel lines and tank were removed. The tank was rusted but did not appear to have any apparent holes. The ground below the tank had no petroleum odors. The tank was located below the previous structure and directly to the north and east of the tank grave were concrete foundation walls. Five soil samples were collected and analyzed for aromatic volatile organics, and total lead synthetic precipitation leachability procedure (SPLP) lead in accordance with CT DEEP tank closure requirements.

The two tank base samples were also analyzed for extractable total petroleum hydrocarbons. Two sidewall samples were collected where no concrete foundation walls existed and two base samples were collected. Also, one sample from below the gas lines was collected for chemical analysis. No Extractable Total Petroleum Hydrocarbons (ETPH), aromatic volatile organics or lead was present above CT DEEP standards. Low levels of aromatic VOCs were detected but at levels that would not suggest a significant release (Appendix C).

### 8.5.2 Aboveground Tanks

A 275-gallon fuel oil tank was noted on the basement floor level of the residential home; no evidence of a release was observed but the tank was in an enclosed portion of the basement. Previous investigations have noted a fuel oil tank in the crawl space below the garage (Atlantic, 1995). As indicated in the 2008 Phase I ESA, the tank had been removed. We confirmed the removal during the Site reconnaissance. No indications of staining or odors were encountered below the crawl space in the approximate location of the former tank.

### 8.6 Polychlorinated Biphenyls (PCBs)

There were no transformers or hydraulic equipment observed on site.

### 9. Transfer Act

The Transfer Act, Conn. General Statutes §22a-134 et seq., applies to the transfer of an "Establishment," which the statute defines as any real property at which or any business operation from which:

- (A) on or after November 19, 1980, there was generated, except as the result of remediation of polluted soil, groundwater or sediment, more than one hundred kilograms of hazardous waste in any one month,
- (B) Hazardous waste generated at a different location was recycled, reclaimed, reused, stored, handled, treated, transported or disposed of,
- (C) The process of dry cleaning was conducted on or after May 1, 1967,
- (D) Furniture stripping was conducted on or after May 1, 1967, or
- (E) A vehicle body repair or painting facility was located on or after May 1, 1967.

No evidence was found indicating the Site meets any of these definitions. Automobile painting occurring in the garage was indicated in the 1961 Sanborn map. However, it appears the garage was used as a warehouse by the May 1, 1967 date indicated in the regulations. The Establishment designation is a legal term and therefore should be rendered by a legal professional with specialized knowledge in Connecticut's environmental laws.

### 10. Findings and Recommendations

GEI has prepared this Phase I ESA at the request of the Client. This assessment was performed in conformance with the scope and limitations of ASTM Standard Practice E 1527-13.

#### 10.1 Conclusions

The Site has a long history of Site uses dating back to the turn of the century. The Site was originally much smaller in size but was built up to extend into the Mystic River. The fill material used to enhance the property boundary was likely coal and slag from the adjacent Velvet Mill operations including the boilers. Shortly after the change in boundary, a residential structure was built which has been used for residential housing to this day. The area near the current detached garage has been used for coal storage, automobile storage, blacksmith shop, stonecutting, auto painting, and warehouse storage. The garage is currently used as a training facility for local crew and rowing teams. In addition, previous investigations have noted a tunnel traversing the Site from the Mill to the east and discharging to the Mystic River. This tunnel was not observed during the GEI reconnaissance.

The findings of this report were as follows:

- Two AOCs was identified as part of this investigation.
  - O AOC No. 1 Site-wide fill: Previous investigations have documented the presence of coal and wood ash fill located across the Site with an estimated depth of greater than 6 feet, and slag material along the shoreline. These materials were confirmed during GEI Site Reconnaissance. Previous soil sampling results have detected ETPH, PAHs, and several metals within the fill material, with a subset of locations where concentrations of PAHs and metals exceeded CT DEEP RSR criteria. The 2008 Phase I ESA includes a statistical evaluation of soil data as allowed under the RSRs as an alternative compliance measure.
  - O AOC No. 2 Former Tunnel: Previous investigations have noted a tunnel traversing the Site and sampling indicated a release of petroleum-impacted wastewater attributed to the upgradient Mill. This tunnel was not observed during the Site reconnaissance and no additional records were available for review from the Town records review.
- No additional AOCs including historic AOCs or controlled AOCs, as defined by AST 1527-13, were evident of past, current or future potential releases of oil or hazardous materials at the Site.

- An ASTM Tier I Vapor Encroachment Screening was conducted. A 1998 petroleum release occurred at the Mystic Seaport was identified. The results of the screening included this off-Site release but did not qualify as an AOC.
- The one AST observed at the residential dwelling did not indicate past or present releases.
- The Site and surrounding neighborhood are included in the National Register of Historic places.
- Miscellaneous oil and petroleum products were observed in the residential dwelling consistent with residential uses.
- No drums or transformers were observed on the Site.
- No sumps, drywells, or hydraulic lifts are known to be at the Site.
- No staining or stressed vegetation was observed along the exterior of the property.
- No evidence was found indicating the Site meets the definition of an Establishment.
   Vehicle painting activities appear to have been performed at the Site but appear to have ceased prior to the activity date set forth in the Transfer Act regulations. The Establishment designation is a legal term and therefore should be rendered by a legal professional with specialized knowledge in Connecticut's environmental laws.

#### 10.2 Recommendations

Based on review of the historical Site uses, we found no evidence the Site qualifies as an Establishment under the Connecticut Transfer Act. In addition, no spills or regulatory orders were identified for the Site. As such, the Site is not currently under any regulatory requirement for environmental investigation or remediation.

Nevertheless, environmental sampling has been performed at the Site. These data indicate the fill material used to increase the property size are impacted with constituents associated with coal and industrial waste (petroleum, PAHs, and heavy metals). It is likely these constituents are widely distributed throughout the Site at various concentrations. Further delineation of the presence of these constituents is likely to be inconclusive.

As such, we recommend Site-wide fill AOC-1 is addressed through institutional controls. Such institutional controls may include development of a soil management plan which specifies appropriate protective measures to take during any intrusive soil activities and future Site redevelopment.

It is our understanding that future redevelopment activities may occur which include the addition of buildings to the Site. The strategic placement of these buildings will render portions of the soils inaccessible and environmentally isolated. The previous investigational data can be used to target these optimal locations. In addition, the placement of impervious materials including asphalt can help render these soils as inaccessible.

To address AOC-2, the former tunnel, we recommend the location and condition of the former tunnel is fully defined. The location and extent of the former tunnel can be identified with the use of ground penetrating radar, if necessary. If the tunnel is still present, the contents of the tunnel should be flushed and properly characterized and disposed. Once the contents of the tunnel is removed, we recommend capping both ends of the tunnel to prevent any additional discharges from occurring.

### 11. Limitations

This ESA was conducted and prepared on behalf of the Trust for Public Land and Mr. Frederick Baumgarten (collectively referred to as the "Client") and its legal representation. No other entity may rely upon the results of the ESA or contents of this report for any reasons or purpose, whatsoever.

The purpose of this ESA is to evaluate whether hazardous substances or petroleum products may be present in the environment at the Site. The opinion that is provided is based on the information described in this report. No soil or groundwater samples were collected or chemically analyzed as part of this evaluation. Discussion of soil or groundwater quality is based on previous investigations not performed by GEI. Future investigations or information that was not available to GEI may result in modification of the findings of this report.

In preparing this report, GEI relied on file information provided by state and local officials, and information and representations made available to GEI at the time of the report. To the extent that such information is incomplete or inaccurate, GEI is not responsible.

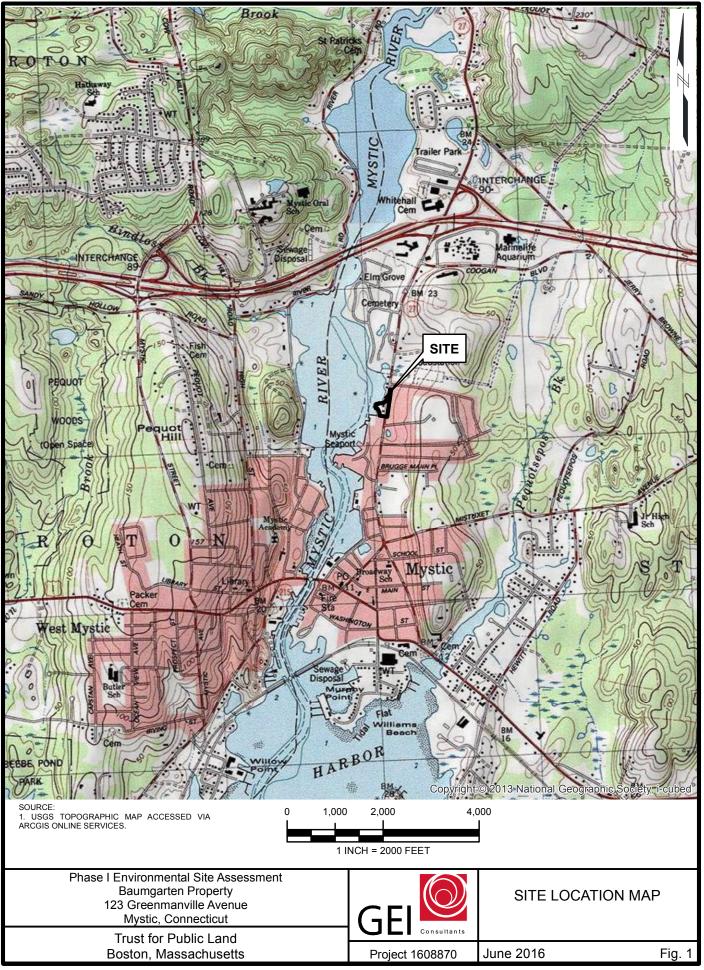

GEI performed this ESA in accordance with generally accepted practices of engineers and/or scientists providing similar services at the same time, in the same locale, and under like circumstances. No other warranty, expressed or implied, is made as to the professional opinions included by GEI in this report.

Per Section 4.6 of ASTM E1527-13, an ESA meeting or exceeding the ASTM E 1527-13 standard and completed less than 180 days prior to date of acquisition of the property or (for transactions not including an acquisition) the date of the intended transaction is presumed to be valid.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

#### **Disclaimer - Copyright and Trademark Notice**

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Copyright 2016 by Environmental Data Resources, Inc. All rights reserved. Reproduction in any media or format, in whole or in part, of any report or map of Environmental Data Resources, Inc., or its affiliates, is prohibited without prior written permission.

EDR and its logos (including Sanborn and Sanborn Map) are trademarks of Environmental Data Resources, Inc. or its affiliates. All other trademarks used herein are the property of their respective owners.

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

#### **SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

#### STANDARD ENVIRONMENTAL RECORDS

#### Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/09/2015 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
MYSTIC SEAPORT MUSEU	75 GREENMANVILLE AVE	S 1/8 - 1/4 (0.192 mi.)	A2	9

#### State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Environmental Protection's Leaking Underground Storage Tank List.

A review of the LUST list, as provided by EDR, and dated 04/26/2016 has revealed that there are 2 LUST sites within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

MYSTIC SEAPORT  Lust Status: 4  LUST Id: 31557	35 GREENMANVILLE ROA	S 1/4 - 1/2 (0.390 mi.)	8	43	

#### State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Protection's "Town Inventory" UST Listing.

A review of the UST list, as provided by EDR, and dated 02/23/2016 has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

#### ADDITIONAL ENVIRONMENTAL RECORDS

#### Other Ascertainable Records

CPCS: A list of Contaminated or Potentially Contaminated Sites within Connecticut. This list represents the "Hazardous Waste Facilities," as defined in Section 22a-134f of the Connecticut General Statutes (CGS). The list contains the following types of sites: Sites listed on the Inventory of Hazardous Waste Disposal Sites; Sites subject to the Property Transfer Act; Sites at which underground storage tanks are known to have leaked; Sites at which hazardous waste subject to the RCRA; Sites that are included in EPA's (CERCLIS); Sites that are the subject of an order issued by the Commissioner of DEP that requires investigation and remediation of a potential or known source of pollution; and Sites that have entered into one of the Department's Voluntary Remediation Programs.

A review of the CPCS list, as provided by EDR, and dated 03/01/2016 has revealed that there are 2 CPCS sites within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	<b>Direction / Distance</b>	Map ID	Page
MYSTIC SEAPORT MUSEU	75 GREENMANVILLE AVE	S 1/8 - 1/4 (0.208 mi.)	A7	43

Lust Status: LUST Completed (DEP's significant hazard definition)

MYSTIC SEAPORT 35 GREENMANVILLE ROA S 1/4 - 1/2 (0.390 mi.) 8 43

Lust Status: LUST Completed (DEP's significant hazard definition)

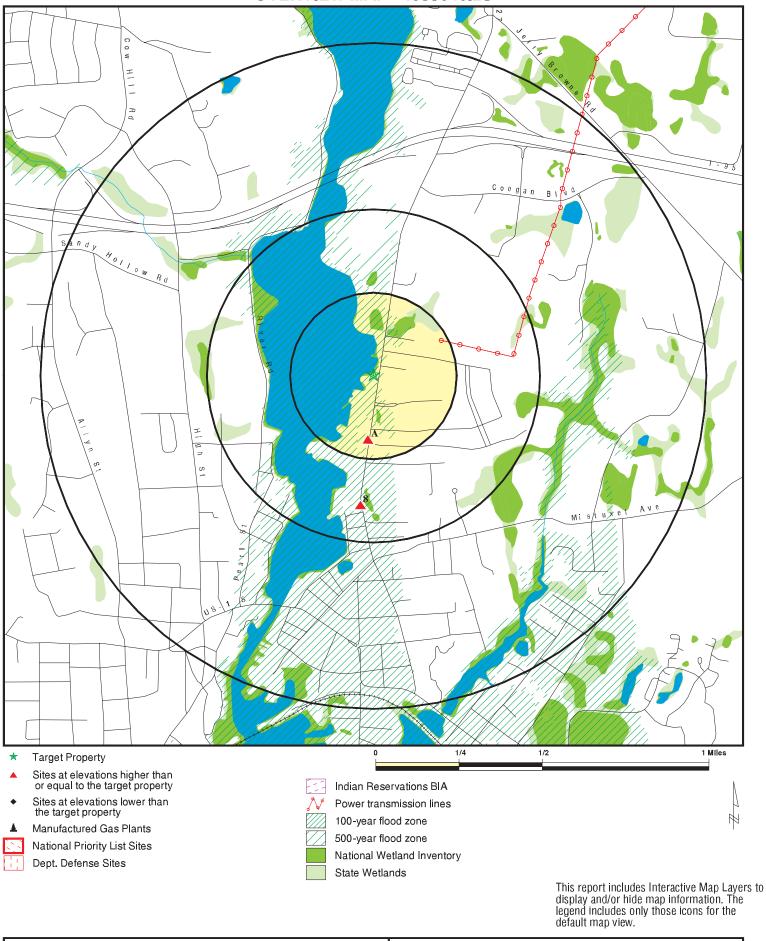

MANIFEST: Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

A review of the MANIFEST list, as provided by EDR, and dated 07/30/2013 has revealed that there are 3 MANIFEST sites within approximately 0.25 miles of the target property.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

### STANDARD ENVIRONMENTAL RECORDS

#### Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

#### Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

#### SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

## Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

#### Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 12/09/2015 Date Data Arrived at EDR: 03/02/2016 Date Made Active in Reports: 04/05/2016

### Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/09/2015 Date Data Arrived at EDR: 03/02/2016 Date Made Active in Reports: 04/05/2016

#### RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 12/09/2015 Date Data Arrived at EDR: 03/02/2016 Date Made Active in Reports: 04/05/2016

Number of Days to Update: 34

Next Scheduled EDR Contact: 07/11/2016
Data Release Frequency: Quarterly

#### RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/09/2015 Date Data Arrived at EDR: 03/02/2016 Date Made Active in Reports: 04/05/2016

# Federal institutional controls / engineering controls registries

#### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 05/28/2015 Date Data Arrived at EDR: 05/29/2015 Date Made Active in Reports: 06/11/2015

Number of Days to Update: 13

Source: Department of the Navy Telephone: 843-820-7326 Last EDR Contact: 05/16/2016

Next Scheduled EDR Contact: 08/29/2016 Data Release Frequency: Varies

#### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 09/10/2015 Date Data Arrived at EDR: 09/11/2015 Date Made Active in Reports: 11/03/2015

Number of Days to Update: 53

Source: Environmental Protection Agency

Telephone: 703-603-0695 Last EDR Contact: 02/29/2016

Next Scheduled EDR Contact: 06/13/2016 Data Release Frequency: Varies

#### US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 09/10/2015 Date Data Arrived at EDR: 09/11/2015 Date Made Active in Reports: 11/03/2015

Number of Days to Update: 53

Source: Environmental Protection Agency

Telephone: 703-603-0695 Last EDR Contact: 02/29/2016

Next Scheduled EDR Contact: 06/13/2016

Data Release Frequency: Varies

#### Federal ERNS list

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous

substances.

Date of Government Version: 03/28/2016 Date Data Arrived at EDR: 03/30/2016 Date Made Active in Reports: 05/20/2016

Next Scheduled EDR Contact: 07/11/2016 Data Release Frequency: Annually

#### State- and tribal - equivalent CERCLIS

SHWS: Inventory of Hazardous Disposal Sites

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 04/23/2010 Date Data Arrived at EDR: 04/23/2010 Date Made Active in Reports: 05/25/2010

Number of Days to Update: 32

Source: Department of Energy & Environmental Protection

### ADDITIONAL ENVIRONMENTAL RECORDS

#### Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

#### EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013 Date Data Arrived at EDR: 03/21/2014 Date Made Active in Reports: 06/17/2014

Next Scheduled EDR Contact: 08/22/2016 Data Release Frequency: Quarterly

#### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

#### RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

#### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

SEH: List of Significant Environmental Hazards Report to DEEP

The Significant Environmental Hazard Statute is intended to identify and abate short-term risks associated with specific environmental conditions identified in the statute. After abatement of short-term risks (meaning abatement of the significant environmental hazard condition), there may still be potential long-term risks associated with the release. However, a significant environmental hazard can be considered abated under the statute even though potential long-term risks may not have been addressed.

#### **EDR HIGH RISK HISTORICAL RECORDS**

#### **EDR Exclusive Records**

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

### RGA LUST: Recovered Government Archive Leaking Underground Storage Tank

The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Energy & Environmental Protection formerly know as the DEP which changes in July 2011 in Connecticut.

Date of Government Version: N/A
Date Data Arrived at EDR: 07/01/2013
Date Made Active in Reports: 01/02/2014
Number of Days to Update: 185

Telephone: N/A

#### OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NJ MANIFEST: Manifest Information

Hazardous waste manifest information.

Date of Government Version: 12/31/2013 Date Data Arrived at EDR: 07/17/2015 Date Made Active in Reports: 08/12/2015

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

#### AHA Hospitals:

#### **USGS TOPOGRAPHIC MAP**

Target Property Map: 5642111 MYSTIC, CT

Version Date: 2012

North Map: 5642113 OLD MYSTIC, CT

Version Date: 2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

### **GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

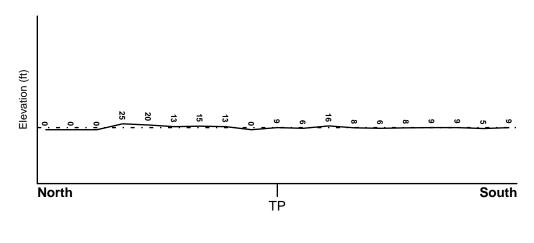

#### **TOPOGRAPHIC INFORMATION**

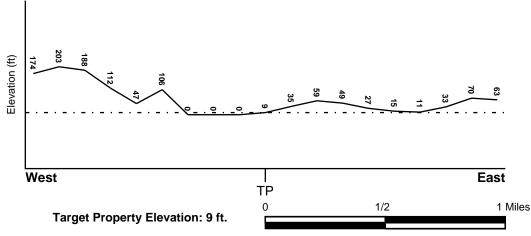

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

#### TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

#### SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

#### HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

**FEMA FLOOD ZONE** 

**FEMA Flood Electronic Data** 

Target Property County **NEW LONDON, CT** 

YES - refer to the Overview Map and Detail Map

NATIONAL WETLAND INVENTORY

**NWI Electronic NWI Quad at Target Property** Data Coverage

**MYSTIC** 

YES - refer to the Overview Map and Detail Map

#### HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### Site-Specific Hydrogeological Data\*:

Search Radius: 1.25 miles Status: Not found

#### **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

> **GENERAL DIRECTION LOCATION** MAP ID FROM TP **GROUNDWATER FLOW** Not Reported

### **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Udorthents

Soil Surface Texture: loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward

movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information								
	Bou	ındary		Classi	fication	Saturated hydraulic		
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity micro m/sec	Con Reaction	
1	0 inches	5 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 7.8 Min: 4.5	
2	5 inches	21 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 703 Min: 0.01	Max: 7.8 Min: 4.5	
3	21 inches	79 inches	very gravelly sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 703 Min: 0.01	Max: 7.8 Min: 4.5	

### Soil Map ID: 2

Soil Component Name: Water

Soil Surface Texture: loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward

movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

### Soil Map ID: 3

Soil Component Name: Urban land

Soil Surface Texture: material

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward

movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

## PHYSICAL SETTING SOURCE RECORDS SEARCHED

#### **TOPOGRAPHIC INFORMATION**

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map Source: U.S. Geological Survey

#### HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Tidal Wetlands

Source: Department of Energy & Environmental Protection

Telephone: 860-424-4054

#### HYDROGEOLOGIC INFORMATION

AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

#### **GEOLOGIC INFORMATION**

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

#### LOCAL / REGIONAL WATER AGENCY RECORDS

#### FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

#### STATE RECORDS

Connecticut Leachate and Wastewater Discharge Sites

Source: Department of Environmental Protection

The Leachate and Waste Water Discharge Inventory Data Layer (LWDS) includes point locations digitized from Leachate and Wastewater Discharge Source maps compiled by the Connecticut DEP. These maps locate surface and groundwater discharges that (1) have received a waste water discharge permit from the state or (2) are historic and now defunct waste sites or (3) are locations of accidental spills, leaks, or discharges of a variety of liquid or solid wastes.

#### EPA-Approved Sole Source Aquifers in Connecticut

Source: EPA

Sole source aquifers are defined as an aquifer designated as the sole or principal source of drinking water for a given aquifer service area; that is, an aquifer which is needed to supply 50% or more of the drinking water for the area and for which there are no reasonable alternative sources should the aquifer become contaminated.

#### Community and Non-Community Water System Wells

Source: Department of Public Health, Water Supplies Section

Telephone: 860-509-7333

Active, emergency and inactive wells used for potable purposes that are owned and operated by active community and non-community water systems in Connecticut.

#### OTHER STATE DATABASE INFORMATION

#### **RADON**

State Database: CT Radon

Source: Department of Public Health

Telephone: 860-509-7367 Radon Statistical Summary

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

## PHYSICAL SETTING SOURCE RECORDS SEARCHED

EPA Radon Zones Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor

radon levels.

#### OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared

in 1975 by the United State Geological Survey

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of the ASTM Standard Practice for Assessment of Vapor Encroachment into Structures on Property Involved in Real Estate Transactions (E 2600-10).

BAUMGARTEN PROPERTY 123 GREENMANVILLE AVE MYSTIC, CT 06355

#### **COORDINATES**

Latitude (North): 41.364688 - 41° 21′ 52.879944″ Longitude (West): 71.963139 - 71° 57′ 47.312622″

Elevation: 9 ft. above sea level

#### PHYSICAL SETTING INFORMATION

Flood Zone: Available

NWI Wetlands: Available

#### **AQUIFLOW®**

Search Radius: 0.333 Mile.

No Aquiflow sites reported.

#### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

#### Soil Map ID: 1

Soil Component Name: Udorthents

Soil Surface Texture: loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward

movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

	Soil Layer Information										
	Boundary			Classi	Classification Sa						
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	hydraulic conductivity micro m/sec	Soil Reaction (pH)				
1	0 inches	5 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 7.8 Min: 4.5				

	Soil Layer Information											
Layer	Вои	ındary		Classi	fication	Saturated hydraulic						
	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity micro m/sec	Soil Reaction (pH)					
2	5 inches	21 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 703 Min: 0.01	Max: 7.8 Min: 4.5					
3	21 inches	79 inches	very gravelly sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 703 Min: 0.01	Max: 7.8 Min: 4.5					

#### Soil Map ID: 2

Soil Component Name: Water

Soil Surface Texture: loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward

movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class:

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

## Soil Map ID: 3

Soil Component Name: Urban land

Soil Surface Texture: material

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward

movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class:

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

	Soil Layer Information										
	Bou	ndary		Classif	ication	Saturated hydraulic					
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		Soil Reaction (pH)				
1	0 inches	5 inches	material	Not reported	Not reported	Max: 141 Min: 0.07	Max: Min:				

## Soil Map ID: 4

Soil Component Name: Haven Soil Surface Texture: silt loam

Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse Hydrologic Group:

textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches Depth to Watertable Min: > 0 inches

	Soil Layer Information											
	Bou	ındary		Classi	fication	Saturated hydraulic						
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity micro m/sec	Soil Reaction (pH)					
1	0 inches	7 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 6 Min: 4.5					

	Soil Layer Information											
	Bou	ındary		Classi	fication	Saturated hydraulic						
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity micro m/sec	Soil Reaction (pH)					
2	7 inches	14 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 6 Min: 4.5					
3	14 inches	20 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 6 Min: 4.5					
4	20 inches	24 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 6 Min: 4.5					
5	24 inches	59 inches	stratified very gravelly sand to gravelly fine sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Well-graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 703 Min: 141	Max: 6 Min: 4.5					

## Soil Map ID: 5

Soil Component Name: Canton

Soil Surface Texture: moderately decomposed plant material

Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse Hydrologic Group:

textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

	Soil Layer Information										
Boundary		ındary		Classi	fication	Saturated hydraulic					
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity micro m/sec	Soil Reaction (pH)				
1	0 inches	1 inches	moderately decomposed plant material	A-8	Highly organic soils, Peat.	Max: 141 Min: 42	Max: 5.5 Min: 3.5				
2	1 inches	3 inches	gravelly fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 6 Min: 3.5				
3	3 inches	14 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 6 Min: 3.5				
4	14 inches	24 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 6 Min: 3.5				
5	24 inches	29 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 6 Min: 3.5				
6	29 inches	60 inches	very gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 6 Min: 3.5				

## Soil Map ID: 6

Soil Component Name: Ridgebury

slightly decomposed plant material Soil Surface Texture:

Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer. Hydrologic Group:

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

	Soil Layer Information											
	Bou	ındary		Classi	fication	Saturated hydraulic						
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity micro m/sec	Soil Reaction (pH)

#### STANDARD ENVIRONMENTAL RECORDS

PRP: Potentially Responsible Parties

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

A listing of verified Potentially Responsible Parties

Date of Government Version: 10/25/2013 Source: EPA

Number of Days to Update: 3 Telephone: 202-564-6023

Last EDR Contact :05/12/2016

RMP: Risk Management Plans

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 08/01/2015 Source: Environmental Protection Agency

Number of Days to Update: 69 Telephone: 202-564-8600

Last EDR Contact :04/25/2016

AIRS: Permitted Air Sources Listing

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

A listing of permitted air sources in Connecticut.

Date of Government Version: 02/01/2016 Source: Department of Energy & Environmental Protection

Last EDR Contact :04/04/2016

AUL: ELUR Sites

Standard Environmental Record Source: State and tribal institutional control / engineering control registries

Search Distance: Property

Environmental Land Use Restriction sites.

Date of Government Version: 02/09/2016 Source: Department of Energy & Environmental Protection

Number of Days to Update: 51 Telephone: 860-424-3912

Last EDR Contact :05/09/2016

**BROWNFIELDS**: Brownfields Inventory

Standard Environmental Record Source: State and tribal Brownfields sites

Search Distance: 0.333 Mile

CBRA has identified over 200 brownfield sites eligible for redevelopment. In most cases these are prime properties for commercial or industrial use. CBRA's grants, assistance and financing lower the financial risks and eliminate the legal, regulatory and environmental risks of redevelopment.

Date of Government Version: 03/25/2016 Source: Connecticut Brownfields Redevelopment Authority

Number of Days to Update: 50 Telephone: 860-258-7833

Last EDR Contact :03/21/2016

**BROWNFIELDS 2**: Brownfields Inventory

Standard Environmental Record Source: State and tribal Brownfields sites

A brownfield site is generally defined as "real property, the expansion, redevelopment, or reuse of which may be complicated

by the presence or potential presence of a hazardous substance, pollutant or contaminantâ;?

Date of Government Version: 11/30/2004 Source: Department of Energy & Environmental Protection

Number of Days to Update: 13 Telephone: 860-424-3705

Last EDR Contact :03/22/2016

CDL: Clandestine Drug Lab Listing

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

A listing of clandestine drug lab locations included in the Spills database.

Date of Government Version: 04/26/2016 Source: Department of Energy & Environmental Protection

Number of Days to Update: 19 Telephone: 860-424-3361

Last EDR Contact :04/04/2016

CPCS: Contaminated or Potentially Contaminated Sites

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.333 Mile

A list of Contaminated or Potentially Contaminated Sites within Connecticut. This list represents the "Hazardous Waste Facilities," as defined in Section 22a-134f of the Connecticut General Statutes (CGS). The list contains the following types of sites: Sites listed on the Inventory of Hazardous Waste Disposal Sites; Sites subject to the Property Transfer Act; Sites at which underground storage tanks are known to have leaked; Sites at which hazardous waste subject to the RCRA; Sites that are included in EPA's (CERCLIS); Sites that are the subject of an order issued by the Commissioner of DEP that requires investigation and remediation of a potential or known source of pollution; and Sites that have entered into one of the Department's Voluntary Remediation Programs.

CT MANIFEST: Hazardous Waste Manifest Data

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013 Source: Department of Energy & Environmental Protection

Number of Days to Update: 45 Telephone: 860-424-3375

Last EDR Contact:05/13/2016

CT PROPERTY: Property Transfer Filings

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

A listing of sites that meet the definition of a hazardous waste establishment. They can be generators, dry cleaners, furniture

strippers, etc. These sites have been sold to another owner.

Date of Government Version: 02/09/2016 Source: Department of Energy & Environmental Protection

Number of Days to Update: 51 Telephone: 860-424-3705

Last EDR Contact :05/09/2016

**DRYCLEANERS**: Drycleaner Facilities

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.25 Mile

A listing of drycleaner facility locations.

Date of Government Version: 07/18/2008 Source: Department of Energy & Environmental Protection

Number of Days to Update: 19 Telephone: 860-424-3026

Last EDR Contact :03/14/2016

**ENFORCEMENT**: Enforcement Case Listing

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

The types of enforcement actions included are administrative consent orders, final unilateral orders and final dispositions of civil

cases through the Attorney General's Office.

Date of Government Version: 04/21/2016 Source: Department of Energy & Environmental Protection

Number of Days to Update: 26 Telephone: 860-424-3265

Last EDR Contact :04/18/2016

**ENG CONTROLS**: Engineering Controls Listing

Standard Environmental Record Source: State and tribal institutional control / engineering control registries

Search Distance: Property

An Engineered Control is a permanent physical structure designed to safely isolate pollutants which would otherwise not comply with the self-implementing remedial options allowed in the Connecticut Remediation Standard Regulations (RSRs). The ECGD includes a description of what is eligible to be considered as an Engineered Control under section 22a-133k-2(f)(2) of the RSRs, a description of the information necessary for the preparation of complete and approvable applications, a step-by-

step outline of the review and approval process, and supplemental resources provided in the appendices.

SEH: List of Significant Environmental Hazards Report to DEEP

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.333 Mile

The Significant Environmental Hazard Statute is intended to identify and abate short-term risks associated with specific environmental conditions identified in the statute. After abatement of short-term risks (meaning abatement of the significant environmental hazard condition), there may still be potential long-term risks associated with the release. However, a significant environmental hazard can be considered abated under the statute even though potential long-term risks may not have been addressed.

2020 COR ACTION: 2020 Corrective Action Program List

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.25 Mile

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Last EDR Contact :03/23/2016

**EPA WATCH LIST**: EPA WATCH LIST

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006 Source: Environmental Protection Agency

SEMS: Superfund Enterprise Management System

Standard Environmental Record Source: Federal CERCLIS

Search Distance: 0.333 Mile

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Last EDR Contact :04/05/2016

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.333 Mile

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

EDR MGP: EDR Proprietary Manufactured Gas Plants

Standard Environmental Record Source: Former manufactured Gas Plants

Search Distance: 0.333 Mile

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Telephone: Not Reported

Number of Days to Update: 55 Last EDR Contact :11/30/2012

#### **TOPOGRAPHIC INFORMATION**

### **USGS 7.5' Digital Elevation Model (DEM)**

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5' minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### HYDROLOGIC INFORMATION

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

#### HYDROGEOLOGIC INFORMATION

### **AQUIFLOW**<sup>®</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

#### **GEOLOGIC INFORMATION**

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services. The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## United States Department of the Interior National Park Service

## NATIONAL REGISTER OF HISTORIC PLACES REGISTRATION FORM

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in How to Complete the National Register of Historic Places Registration Form (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

1. Name of Property	
historic name	
other names/site number <u>Rossie Velvet Mill Historic D</u>	<u>District</u>
street & number <u>see continuation sheet 2:1</u> not city or town <u>Stonington</u> state <u>Connecticut</u> code <u>CT</u> county <u>New zip code06355</u>	t for publication <u>N/A</u>

NATIONAL REGISTER OF HISTORIC PLACES CONTINUATION SHEET

Rossie Velvet Mill Historic District, Stonington, New London County, CT

Section 7 Page 1

The Rossie Velvet Mill Historic District is north of the village center of Mystic; it extends along the spine of Greenmanville Avenue between Pleasant Street on the northernmost edge of the district to the remnants of a tidal marsh near Mystic Seaport's southernmost parking lot. Residential streets running east off of Greenmanville Avenue north and south of the large red brick Rossie Velvet Mill (built 1898; 112 Greenmanville Avenue, Photographs #15, #28-32) are included, as well the mill complex itself and the mill owners' houses (Ernest Rossie House, 72 Greenmanville Avenue, Photograph #12, and Bruggeman-Rossie-Blanchette House, 3 Bruggeman Place, Photograph #16). On the side streets the first lots to be built on were those on the relatively flat land nearest Greenmanville Avenue, but soon others were developed on the hillside. A ridge of high ground parallels Greenmanville Avenue, marking the easternmost limits of the district. The western boundary of the district is Greenmanville Avenue itself and, in the case of the former blacksmith shop for the mill and an adjacent house, the Mystic River, which flows roughly parallel to Greenmanville Avenue.

The Rossie Velvet Mill Historic District is comprised of 51 properties. The smaller buildings are mainly residential. built between 1850 and 1950, with the bulk being constructed between 1900 and 1950. The increased need for housing, spurred by general population growth in the late 1890s, and the founding and expansion of the Rossie Velvet Mill on Greenmanville Avenue, led to the establishment of new streets east of Greenmanville Avenue. Construction of single and multi-family houses along the new streets extended an existing residential area along Greenmanville Avenue, and the latter became more intensively developed. Most of the earliest houses are vernacular Victorian structures like the Ralph Hughes House at 130 Greenmanville Avenue (Photographs #2, #9, #28, and #32). The late nineteenth and early twentieth-century residences were mainly built in the Colonial Revival, Shingle, and Bungalow styles. A fine example of the Shingle Style in the district is the Thomas Weir House at 5 Bruggeman Place (Photograph #3). A number of large Colonial Revival-style houses like those at 132, 136, 140, and 144 Greenmanville Avenue (Photographs #1-2, #11, #28, #31), and 3 Rossie Street (Photograph #12) grace the district. single-family houses built between 1900 and 1935, mainly bungalows, are also represented in the district. Examples of two different types of smaller houses are the Henry Fain House, 19 Bruggeman Place (Photograph #7) and the Menge House, 4 Rossie Street (said to have been manufactured by Sears Roebuck). Compact Victorian Vernacular and Colonial Revival houses are also part of the streetscape (see 142 Greenmanville Avenue, Photographs #1, #7, and #28 for the former). The shingled John Spicks House (20 Rossie Street, Photograph #9) seems to be inspired by the Craftsman Style, and the neighboring John Litterscheitt House at 21 Rossie Street has some Colonial Revival features. Some houses were built or converted for multi-family use. The largest multi-family structure was dubbed "The Block" or "The Square House" (5 Velvet Street).

The non-residential properties include the Rossie Velvet Mill (112 Greenmanville Avenue, Photographs #15, #28-32), a warehouse (123b Greenmanville Avenue; the former blacksmith shop for the mill), a former auto showroom and repair garage (90 Greenmanville Avenue, Photograph #20), and the Social Society Frohsinn (or German Club; 54 Greenmanville Avenue, Photograph #14). Vacant lots in the district have been filled with small frame capes and ranches dating from the 1940s through the 1960s, like the Elsie Edelhoff House, built in 1952 (28 Bruggeman Place, Photograph #19).

#### Rossie Velvet Mill Historic District, Stonington, New London County, CT

Section 8 Page 1

The Rossie Velvet Mill and its immediate neighborhood is a testament to the sustaining power of the textile industry as an engine of economic development from the late nineteenth to the mid-twentieth century. The housing on the residential streets running east from Greenmanville Avenue was built partly in response to the establishment of the Rossie Mill. The district contains not only a well-preserved example of a textile mill, but also typical examples of the kind of residential structures which often sprang up in the vicinity of mill buildings to house the immigrants who usually worked at such mills. A rare survival in the neighborhood is the original Social Society of Froshinn (German Club) building, constructed only a few years after the mill, and used to this day for its original purpose; some current members are the descendants of the first mill employees.

#### Historic Background

By 1850 the present day village of Mystic was a community that had moved away from its agricultural roots towards a market economy based on the sea and industry. The wealthiest and most influential citizens were those associated with ship building, ocean-going commercial ventures, and local industry. Mystic, like so many Connecticut villages during the last half of the nineteenth century and well into the early part of the twentieth century, saw rapid shifts in its population. The local economy, largely dependent on the dwindling revenues from shipbuilding, fishing, and maritime commerce in the third quarter of the nineteenth century, was, like much of the United States, in a period of depression, or even deflation. Civic leaders were desperate to find a means to diversify and expand the economic base. The village had been from the early nineteenth century the site of various textile enterprises. Mid-century a woolen mill (now part of the Mystic Seaport campus) was built on the east bank of the Mystic River. By the late nineteenth century this east bank of the river, formerly dominated by the Joseph Stanton Williams Farms on the east side of what is today Greenmanville Avenue, became an industrial section of the community. In 1897 the Mystic Industrial Company was incorporated to attract other manufacturing concerns. Perhaps inspired by the velvet mills established in 1892 by Charles Wimpfheimer in nearby Stonington Village, the corporation raised \$22,000 to bring a "German velvet mill" to the neighborhood. Elias Williams, who had inherited his father's northern farm (also known as "Elm Tree Farm"), donated two acres of land to the stockholders of the Mystic Industrial Company, of which he was a director. The Rossie Velvet Company opened the following year, leased by the proprietors of a Süchteln, Germany, velvet mill, on the shores of the Mystic River. The high tax on imported goods assessed by the McKinley Tariff of 1890 had led these entrepreneurs to seek a manufacturing facility in the United States. The introduction of the a new mechanized loom c. 1880 had caused a surplus of experienced German weavers, so it was only natural that some of these artisans were recruited for the new American-based enterprise. The mill was rapidly completed, and by mid-March, 1898, textile production had begun. At the peak of its business the mill was Mystic's largest employer. It had 150 looms and over 200 workers working three shifts by the 1920s, and the number of employees later rose to near 500.<sup>2</sup> One of the highlights of the year was the annual employee picnic, which was an elaborate affair until the Depression, after which it was scaled back somewhat.

Many of the weavers were German immigrants, and although a trolley line was extended along Greenmanville Avenue by 1911, a good number sought housing in the immediate neighborhood. The Social Society of Froshin (German Club) founded by these immigrants is also within the district. Following the construction of the mill Elias Williams sold more land to the Rossies, and after his death his wife, Sarah P. Williams, sold still more. Early views of the mill show Elm Tree Farm's largest barn which

Rossie Velvet Mill Historic District, Stonington, New London County, CT

Section 8 Page 2

was located, along with the farmhouse, on the high ground east of the mill (Photographs #31-32). The Williamses also sold off land for building lots to the north and south of the mill. New streets were laid out, stretching from Greenmanville Avenue to the east; all but Bruggeman Place stopped at the top of the ridge. Bruggeman Place was the longest and extended past the crest of the ridge. The street names, especially Rossie Street, Velvet Street, and Bruggeman Place (Peter Bruggeman was a stockholder of the Mystic Industrial Company, and a member of the building committee for the 1906 expansion of the mill, as well as its first superintendent) illustrate the close relationship between the mill and the neighborhood. The 1916-1917 Mystic directory shows that more than 50 neighborhood residents were employed at the mill. This was a period when almost every Mystic family, Yankee or immigrant alike, had a relative working there. Helen May Clarke, the offspring of two old local families, gives an account of her stint as an employee in her diary. Her first impression in March, 1925, was that of a "vast place of crashing machinery." In her diary she speaks of the frenzied pace of work, as well as the constant noise, and the terrible heat workers endured on humid summer days despite awnings and fans: "The mill itself is little short of an inferno...the switch-board buzzes like a nest of enraged hornets". The physical plant of the mill expanded five times between 1898 and 1932, despite labor strife and troubles experienced during World War I when the mill had to cut its production due to a shortage of imported materials necessary to the mill's operation. The mill specialized in what was called "transparent velvet," a high-quality crush-resistant cloth that was popular for winter party dresses. Also in demand for women's hats was the mill's line of velvet that resisted waterspotting. The quality of the mill's product was maintained by employing only the most skilled workers and limiting the number of looms worked by each weaver to two. The docking of the German submarine Deutschland in New London in October, 1916, created a huge sensation. It brought the aniline dyes to create the deep, rich colors that made Rossie velvet so popular. These German-manufactured dyes were considered superior to American-made dyes. <sup>4</sup> The captain and crew of the submarine were entertained at a dinner at the German Club during their stay in Connecticut. Once the United States entered the War anti-German backlash took its toll on the Rossie Velvet Mill, and its first and second-generation immigrants of German origin. In March, 1919, 500 shares, all the capital stock of the Rossie Velvet Company, were sold at auction by the Alien Property Custodian. Majority ownership of the mill seems to have been retained by William Oppenhym & Sons of New York, who originally served as the commission merchants for the mill's products, but the Elias Williams family also retained a large interest in the mill. John T. Rossie, who had come from Germany in 1910 to be the firm's chief executive in Mystic, continued to run the mill. Ernest Rossie's house is located within the district south of the factory, John Rossie lived for a few years in an adjacent house at 3 Bruggeman Place, originally the home of the mill superintendent. Peter Bruggeman.

The Great Depression brought more severe hardship, and in 1937 the mill was closed and its contents were sold at auction. The following year John Rossie, undeterred, purchased a majority share of the company's stock, and weaving operations were back under way by the end of June in the reorganized J. Rossie Velvet Company. Although the new company was reduced in size, it continued to produce high-quality velvet. Initially the cloth was rayon velvet, and later the velvet was made of nylon. In 1955 the company was sold to a new owner, Harry W. Baumgarten; it continued to produce high quality velvet until 1958, when like many other northern mills it succumbed to competition from textile mills in the south where labor costs were much lower. By time the mill closed for good, the workforce had dwindled to 76.6

As the mill's output declined, several other companies leased space in the complex. In April 1940, Foxcraft, Inc. began to produce tufted bedspreads there. Another occupant was the Temple Radio Company. Although the main headquarters was located in nearby New London, the firm utilized space in the mill to assemble cases for the line of radios, known as "Templetone"; this firm was an early innovator in the design of television sets, and these television cases were also built at the Rossie Mill, where a number of neighborhood residents were employed.<sup>7</sup>

The neighborhood bordering the upper end of Greenmanville Avenue was not strictly industrial; it was also residential. This area attracted not only German textile workers, but also other new immigrants. Although these immigrants came from a variety of places, one particularly notable group put down roots in Mystic. They were from the valley of Zoldo, high in the Dolmites, now part of Italy. These immigrants began to arrive in America in the 1880s, but by the 1890s their number increased, peaking between 1900 and 1910. Finding work in the Rossie Mill and other businesses in town, the Zoldani purchased or constructed a number of the houses in the district. Among this group were skilled masons and carpenters, and their craftsmanship can still be appreciated in the houses they occupied in the neighborhood. Among those specializing in woodworking were Antonio (Arthur) Panciera, his father, Giovanni-Battista Panciera, and Giovanni Favretti, Vittorio Brustolon, and Libero Pra. Arthur Panciera studied at the Lowell Institute (then part of the Massachusetts Institute of Technology) and not only built, but also designed residences. He was known especially for his work on the restoration of eighteenth-century houses. In the district there is at least one example of the work of Agostino Lazzaris, one of the masons who worked on William Gilette's Gilette Castle, and the springhouse and bridge in Park Spring (now Alex Caisse Park) in Willimantic, Connecticut: he constructed the foundation of the Giovanni Favretti House (#27 Bruggeman Place). Of this group only Giovanni Favretti lived in the district. Other houses owned and occupied by Zoldani within the district include the Henry Fain House (#19 Bruggeman Place), the Santin House (5 Rossie Street), and the John Fain House (#12 Rossie Street). Prominent Zoldani businessman Sebastiano Santin (1872-1955) opened one of Mystic's first automobile dealerships on the corner of Greenmanville Avenue and Hinckley Street (#90 Greenmanville Avenue). The dealership was owned by Santin and his sons Giuseppe (Joseph) and Aldo, and operated on the site from 1920 until 1938, when the business moved to larger quarters on Holmes Street. Like their German counterparts, the Zoldani established a social club that was very active until hard economic times during the Great Depression. World War II caused its closure. The Club Alpino (Alpine Club) hall was built around 1922 on Slaughterhouse Hill a few blocks outside the district boundaries, but before the clubhouse was built several families united to build a bocce court (now demolished) on the property of Henry Fain (#19 Bruggeman Place). This court continued to be a Zoldani gathering place even after the construction of the club house.8

The neighborhood in the twentieth century was a mixed-use area. The Rossie Velvet Mill was surrounded by single- and multi-family houses, as well as nearby establishments like the delicatessen where Helen Clarke went for hot dogs. The Santin garage was south of the mill. The biggest change in use in the neighborhood came with the establishment in the late 1940s of the Mystic Seaport museum complex, which incorporated historic buildings moved from other parts of town and other places in a village setting on the sites of the former Greenman shipyard and the former woolen mill on the west side of Greenmanville Avenue. Other new buildings were constructed within the complex, most dating between the mid-1950s and the mid-1970s. Properties associated with the Rossie family on the east side of Greenmanville Avenue,

United States Department of the Interior National Park Service

NATIONAL REGISTER OF HISTORIC PLACES CONTINUATION SHEET

Rossie Velvet Mill Historic District, Stonington, New London County, CT

Section 8 Page 4

including the velvet mill and houses occupied by the Rossie brothers, were eventually added to the museum complex, and other single-family houses in the neighborhood were also purchased as the museum expanded. The wetlands south of the mill were partially filled and a parking lot for the museum was constructed on Greenmanville Avenue south of Bruggemann Place on a larger wetland.

#### Architectural Significance

The largest building in the district, covering 147,000 square feet, is the Rossie Velvet Mill. The contract for the construction of the first section was let in late 1897; it was designed by New York architect Robert D. Kohn, and built by the Meriden firm of H. Wales Lines & Co. Kohn (1870-1953) is best known as the architect of the R.H. Macy Department Store, Montefiore and Mt. Sinai Hospitals, the New York Ethical Society Meeting House, and Temple Emanu-El in New York City, but he was also the designer of industrial buildings such as the H.R. Black Garment Factory in Cleveland, Ohio. Kohn received his training at Columbia University and the Ecole des Beaux Arts. By 1895 he had established his own practice in Manhatten, and was already identified with a movement to improve the nation's housing stock. He was prominent in professional organizations, serving as the president of the New York Chapter of the American Institute of Architects in 1913 (he was named a Fellow of the AIA in 1921), and the National Fire Protection Association (1913-14), and he was one of the leading figures of the Regional Planning Association of America. As the long-time president of the Ethical Culture Society, he was deeply involved in the Progressive Movement. His later career saw him named by President Roosevelt as the Director of the Housing Division of the Public Works Administration (1933-34), and he was vice-president and a member of the board of design for the New York World's Fair of 1939.

The cost for the earliest part of the mill was estimated at \$24,000, and the main block was comprised of six sections with a sawtooth roof, and it was illuminated by 9,000 square feet of glass. The contract called for the main block, boiler, and engine house to be completed by February 1, 1898. An addition was made in 1902, and in 1905 the Mystic Industrial Company voted to increase their capital from \$90,000 to \$175,000 in order to double the mill's size. This work was completed in 1906. Three other expansions were made in 1913, 1928, and 1932. Two large steam generators powered the mill machinery; these were fueled by soft coal brought up the Mystic River to a point opposite the mill near the former site of Mystic Seaport's New York Yacht Club Station. An overhead crane lifted the shipments onto an electric truck that ran through a tunnel under Greenmanville Avenue. Initially the water for the mill, a large quantity of which was required for the dying operation, was supplied by a water tower (no longer extant) on the hill behind the mill. A later tank was located adjacent to the mill. The mill is currently used for storage and exhibition space by Mystic Seaport. Although the mill has undergone some alterations due to its changing use, it is still largely intact.

The period between the 1897 establishment of the mill and 1950 saw the construction of the bulk of the residences in the neighborhood. The housing stock includes the relatively small and simple late Victorian vernacular house whose most distinguishing feature is the millwork on the front porch (see, for example, #130 and #142 Greenmanville Avenue; Photographs #2, #9, #1, and #10). The Colonial Revival is the best represented of all the different styles of residential architecture. Fine examples of large and small frame houses built between 1900 and 1925 abound in the neighborhood. One house, at #4 Rossie Street, according to neighborhood tradition, was manufactured by Sears and Roebuck. This type of house, ordered by mail, and assembled on the spot by local labor, was an early twentieth century innovation, and such

United States Department of the Interior National Park Service

NATIONAL REGISTER OF HISTORIC PLACES CONTINUATION SHEET

Rossie Velvet Mill Historic District, Stonington, New London County, CT

Section 8 Page 5

houses can be found in many contemporary neighborhoods. Although for the most part the designers and builders of these houses are not known, they are typical of the kind of residences that were popular throughout the nation during the period. The preservation of numerous documented examples of houses and structures built by or for immigrant craftsman, most notably those of Zoldan or German origin, is an usual feature of this neighborhood which stands in contrast to other areas of Mystic built and occupied by longtime Connecticut natives.

Few buildings constructed after 1950 have been added to the neighborhood, with the exception of some infill housing. The single major change to the neighborhood was the establishment of a museum complex on the east bank of the Mystic River, and the creation of parking lots on the east side of Greenmanville Avenue to serve the museum complex.

Even with the insertion of a major museum complex within the district, the scale has been little changed. The character of the neighborhood has been preserved, even though the mill no longer serves its original purpose and the activity of visitors has replaced the shift changes of mill hands. The mill building's historic exterior features are essentially intact.

#### **Boundary Description**

The boundaries encompass the land historically associated with the neighborhood immediately surrounding the Rossie Velvet Mill on Greenmanville Avenue, once part of one of the Joseph Stanton Williams Farms, and inherited by Elias Williams in 1889 (also called Elm Tree Farm). The spine of the district is Greenmanville Avenue, and the district also includes short sections of the streets that run east from Greenmanville Avenue to the eastern limits of the northernmost section of Elm Tree Farm. The district boundaries reflect the part of Elm Tree Farm that was sold off between 1897 and 1950 by the Williams heirs. Part of the western boundary is formed by the east bank of the Mystic River.

#### Boundary Justification

The district is bounded on the north in part by the Morgan Coogan Farm, once the northernmost section of Elm Tree Farm that Elias Williams inherited from Joseph Stanton Williams. Elm Grove Cemetery also forms part of the northern boundary. On the west the district is bounded by the Mystic River, some mid-twentieth-century commercial buildings, and the part of the Mystic Bridge Historic District which contains the campus of the Mystic Seaport Museum's property on the west side of Greenmanville Avenue. On the east it is bounded on mid-twentieth-century residential construction, and on the south it is bounded by the Mystic Bridge Historic District.
